AROUND THE GLOBE.**

WWW.STORK.COM

QUALITY PLANT & EQUIPMENT

Stork's Plant and Equipment (P&E) Hire division, based in the United Kingdom, delivers fully customisable solutions, tailored to your specific project needs. Whether it's onshore or offshore, we can support you every step of the way with your rental needs.

OUR SERVICE

We provide a seamless service through:

- Effective project management
- Competitive rates
- Shipping and logistics management
- Fully trackable equipment through our Radio-frequency identification (RFID) tagging system
- Speedy turnaround times from enquires to orders and delivery
- Technical support

OUR EQUIPMENT

Stork boasts an extensive rental range of **tens of thousands** of plant and equipment in the following areas:

- Bolting & Tensioning
- Electrical
- Inspection & Non-destructive testing
- Topside Equipment
- Sheet Metal & Tooling
- Painting & Blasting
- Breathing Apparatus & Gas Detection
- Water Jetting
- Scaffolding
- Compressed Air Equipment

MAINTENANCE OF EQUIPMENT

All of our equipment is maintained by Stork's highly competent and qualified in-house teams. Each team specialises in their respective technical areas, with vast onshore and offshore experience.

All plant and equipment is fully tested, maintained to manufacturers' standards as well as the latest regional legislation and cleaned prior to each hire.

A detailed log of all assets is rigorously maintained and updated containing maintenance and service reports, alongside hours used and all certification. This historical data allows us to track the performance and condition of our kit offshore or onsite.

Stork provides highly skilled technicians to perform maintenance and recertification of the equipment directly on your site.

All of this combined helps to ensure our plant always operates at peak operating performance.

OUR BASE

Our Plant & Equipment Hire base is located in Aberdeen, with operational bases and facilities located in Grimsby, Falkirk, Teesside and Southport but we can support your rental needs anywhere in the world.

Our Aberdeen workshop and warehousing facilities boast a vast space of 7,318 m². The open yard has an area of 7,121m², which accommodates our Plant & Equipment Team as well as inspection, NDT, corrosion monitoring, heat treatment, a training centre and occupational health facilities.

DEDICATED TO INNOVATION

Stork's Plant and Equipment Hire division always strives to remain at the forefront of innovation. To stay ahead of the curve, we continually assess the latest industry challenges so that we can ensure we have the state-of-the-art equipment required to ensure your projects run safely, efficiently and remain within budget.

Award-winning technologies:

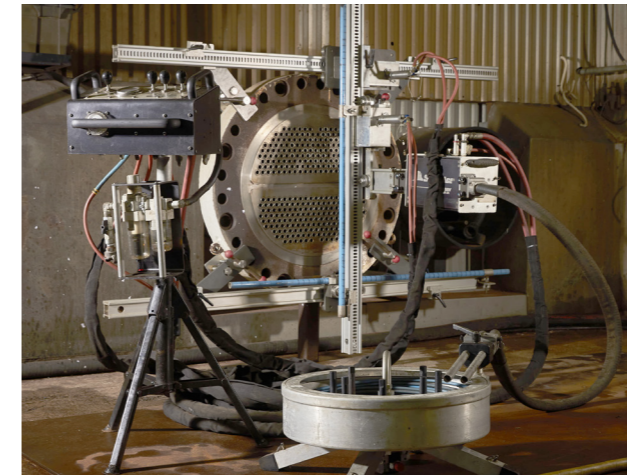

Our in-house developed and award-winning ERBAS (extended reach breathing apparatus system) has allowed full breathing apparatus functionality at far greater distances from the designated safe area than the duration of the emergency air cylinder allows. This has greatly increased confined space work productivity and ensured safety. We have also spent considerable time and resources in developing bristle blaster tools which reduce the danger of Hand-Arm Vibration Syndrome developing in our operators.

Advanced tracking system:

Each and every item of Stork's Plant & Equipment inventory is RFID tagged. RFID tracking provides a way of automating the management and locating process of physical assets.

It works by loading an RFID tag with data and attaching it to a piece of equipment. Having the ability to automate our tracking and monitoring processes provides many benefits:

- All of Stork's plant and equipment assets are continuously tracked
- Negates human error
- Collects track and trace data in real-time
- Improves the visibility of our plant and equipment
- Assists with locating lost or misplaced items
- Maximises the accuracy of our extensive inventory

LONG-TERM RENTAL OPTIONS

We understand that purchasing equipment is often not financially viable, but here at Stork we offer options for long-term rental to allow extensive work scopes to be successfully executed.

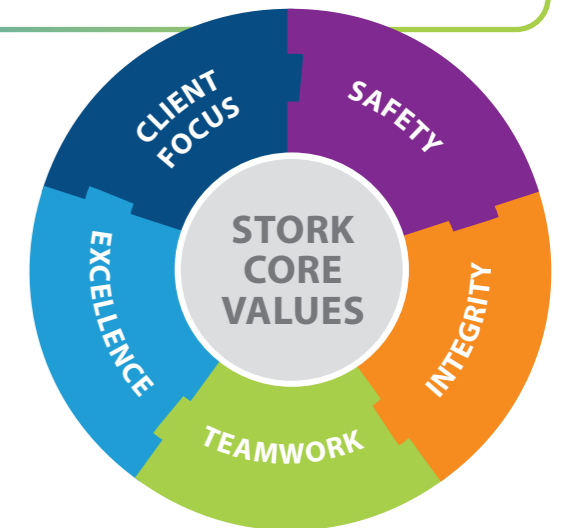

We have a vast amount of experience in the support of long-term projects using our asset management system we keep fully up to date with the certification and maintenance of equipment and can also provide specialist packages complete with manpower to support your project needs.

SAFETY IS A CORE VALUE

Stork's Core Values act as our behavioural compass. They guide our actions, advance our objectives and power our performance.

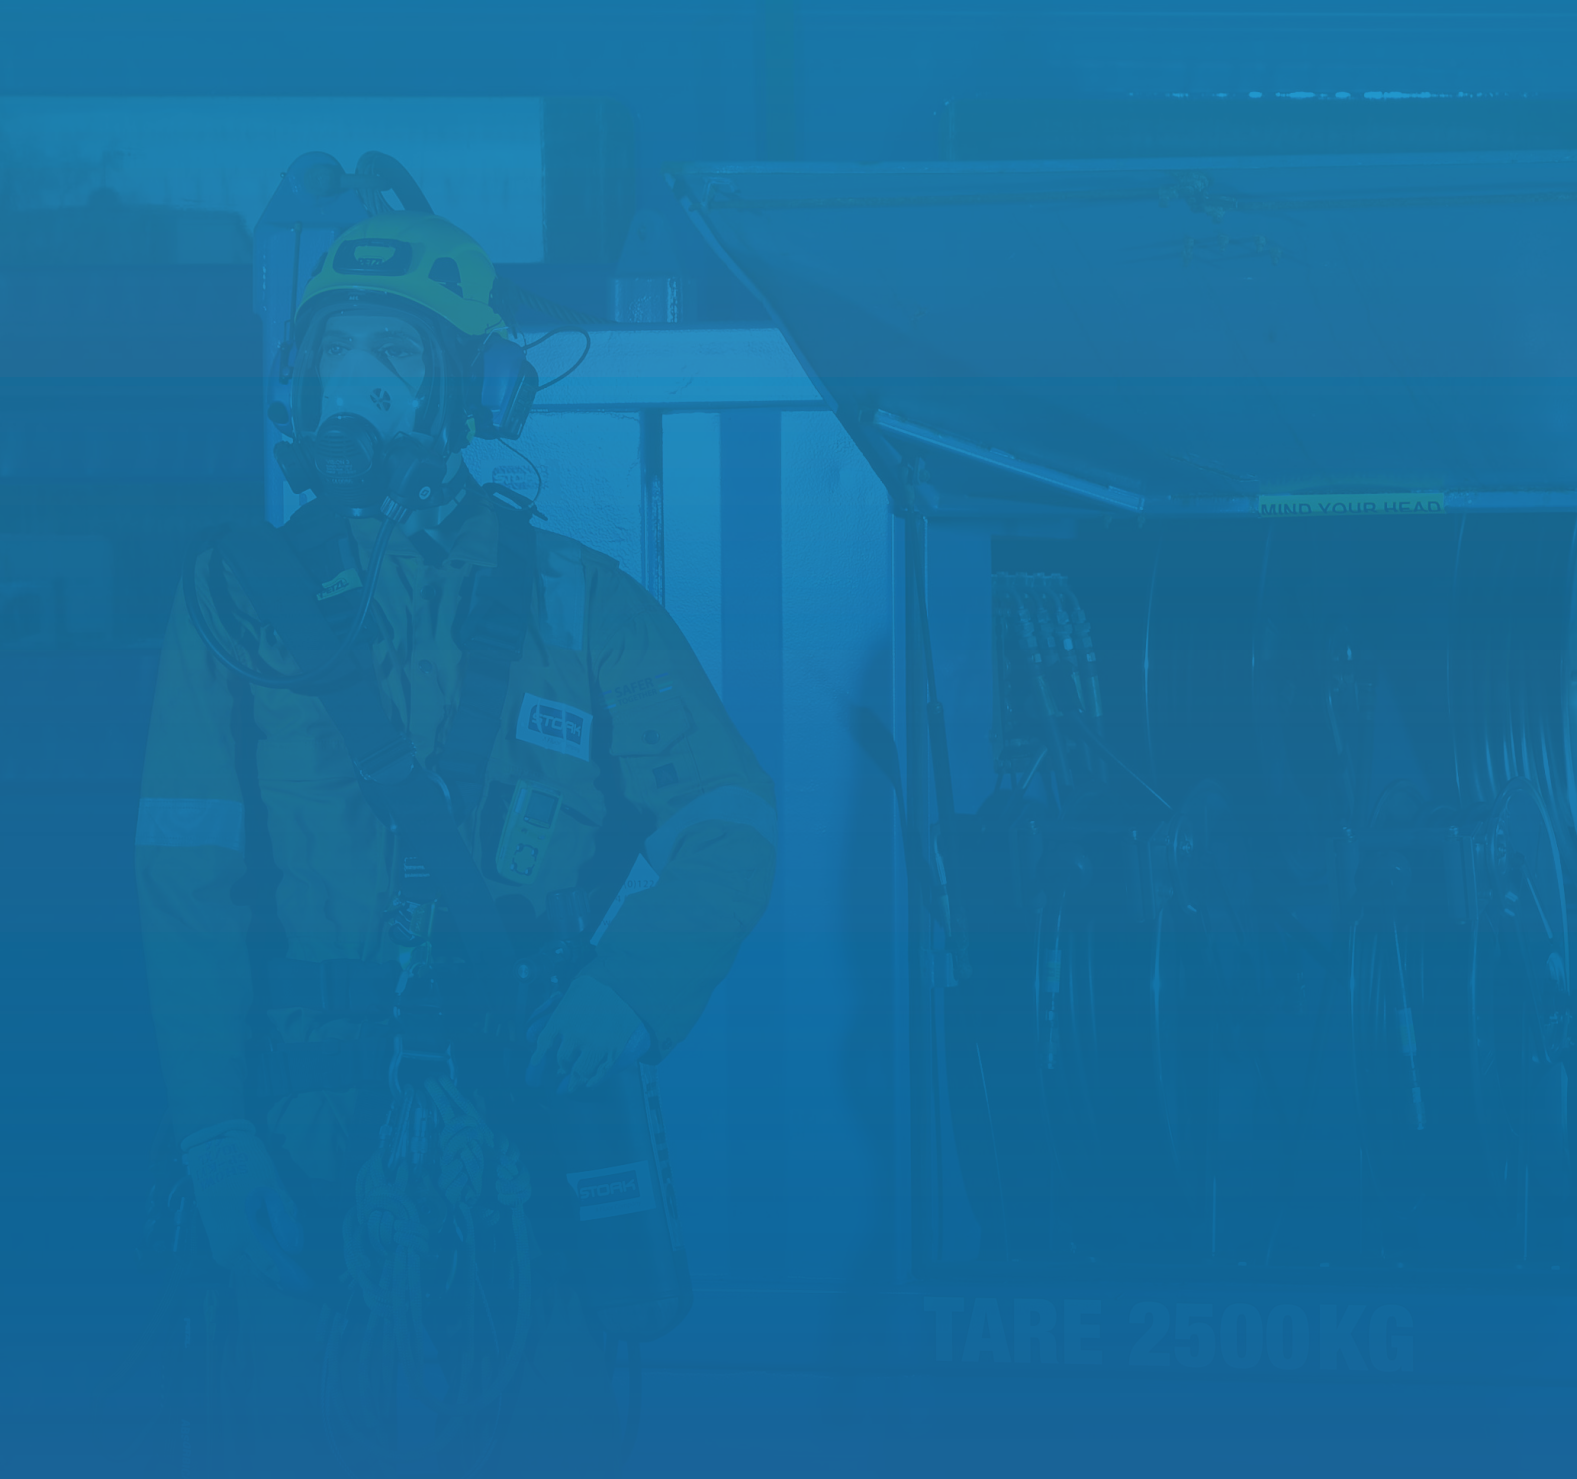

We promote a caring, preventive culture where no one gets hurt – through an uncompromising focus on safety in the workplace.

Supported by our HSEQ engagement platform, named Safer Together, we deliver our services and embed a culture to optimise safe production and improve asset efficiency.
